

PLANT BIOSECURITY PRIORITIES

CONNECTING

plant industries, governments & researchers

*No registration costs

14–15 July 2016

An initiative of the National Plant Biosecurity
RD&E Strategy Implementation Committee

LOCATION

AgriBio, Centre for AgriBioscience, Bundoora – Melbourne

“The best minds from across research, industry and government should formulate a set of high level priorities and corresponding important research challenges for Australia.

These challenges should be practical problems that capture the imagination of our research and business communities” – from the Australian Government report, *Boosting the Commercial Returns from Research* (2014).

**Keynote speakers from
government, industry
peak bodies and
research**

**Workshops to
contribute your
expertise and ideas**

FORUM

To make the most of research investment, RD&E needs to be strategic, collaborative and well planned.

This two-day forum brings together plant industries, regulators, policy makers and research leaders to link national science and research priorities to the needs of plant industries and governments.

We are inviting organisations to share their perspectives on problems and solutions in plant biosecurity so that research priorities can be aligned with the areas of greatest need.

In addition to contributing your ideas to the future of plant biosecurity research, the forum will provide an opportunity to enhance networks and foster partnerships with others who want to advance plant biosecurity science.
