

A close-up photograph of a honeycomb. A honey bee is positioned in the upper right quadrant, facing left. Three small, blue beetles with yellow spots are scattered across the honeycomb cells. The honeycomb cells are filled with a golden, viscous substance. The text "Spotted anything unusual?" is overlaid in white on the left side of the image.

**Spotted
anything
unusual?**

NOTHING WILL PROTECT YOUR HIVES MORE THAN A GOOD HARD LOOK

Biosecurity is everybody's responsibility.

In Australia, biosecurity operates as a partnership between government, industry and the community. Ultimately, biosecurity is everybody's responsibility. Being at the front line, beekeepers have an important role in keeping watch for exotic pests and diseases.

Early detection and reporting is the key to protecting hives, industries and the communities that rely on them. Every moment lost harms our chance of successful eradication.

If you spot anything unusual in your hives please report it. You can call the Exotic Plant Pest Hotline on 1800 084 881. The call is free, except for mobiles.
